Idro

Temperature Controller for Pellet Stove

EasyTech.One is a Pellet stoves control system available in Air and Hydro version.

Is characterised by:

- Installing and use simplicity
- Simple and direct user's functions
- Reliable and flexible functioning software with well-established TiEmme elettronica technology
- Advanced functions available for the builder to adapt to different stoves and installations

Product composition:

- Control Board with 4 fixing points, solid and sure.
- Extractable connectors
- Exhausting Temperature Probe until 500 °C
- Room Temperature Probe
- Boiler Probe
- Connection cable Main Board Control Panel
- Control Panel with antistatic cover
- Connector RS232 for the Modem/Computer connection

Safety rules

Before working on the system make follow:

- The accident prevention and Room prevention rules
- The National Institute rules against the work accidents
- The legal safety rules

Conformity declaration

Applied rules: EN 60730-1 50081-1 EN 60730-1 A1 50081-2

This manual is done with care and attention, but the information could be incomplete, not comprehensive or could have mistakes. For this reason the design, the information could be modified without advance notice according to the model.

3.7 Display

The activation is with a click of P1.

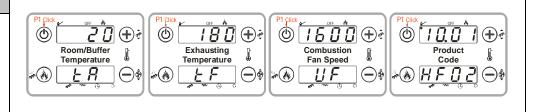

tA = Room / Buffer Temperature

tF = Exhausting Temperature

UF= Combustion Fan Speed

[RPM/Volt]]

HF02+Product Code

3.8 Radio Remote Control

The button **1** activates the Extinguishing ; the button **2** activates the Ignition

The buttons **3** / **4** decrease / increase the Power Combustion

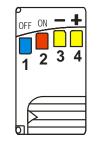

Code Change:

On the Remote Control:

- Open the battery box moving right the cover
- Modify dip-switch's configuration and close the box

On the Thermoregulator:

- Switch OFF the power supply (230 Vac)
- Switch ON the Power Supply pressing at the same time one button on the Remote Control
 waiting about 5 seconds until an acoustic signal is emitted confirming the code learned

4 User Menu (2)

Push contemporary the buttons **P2** and **P4** for three seconds to enter into User Menu (2)

To scroll the Menu push the buttons P3 or P4

To enter in a submenu push the button P2

• To modify the blinking value push the button **P3** (to increase) or **P4** (to decrease)

■ To exit push the button **P1**

TP02

5.1 Auger Menu

Setting of the Auger TimeON defined for each phase/power in the Auger Period P05 If a value is set = **0**

the Auger is desabled for the corresponding Power/Phase

the Auger works continuously for the corresponding Power/Phase If a value is set \geq **P05**

The TimeON regulation is settable as steps of 0.1 seconds

The set or calculated values are automatically limited in the threshold P05 and P27

| Code | Description | Min | Max | U | Def. |
|------------|---|-----|-----|-----|------|
| C01 | Auger TimeON Ignition | 0 | 60 | [s] | |
| C02 | Auger TimeON Stabilization | 0 | 60 | [s] | |

| 6.1 | Off | | | | | |
| Timer | | Controls | Combustion Fan | Auger | Igniter | |
| | If Exhausting Temp. > Th01 | → goes in Extinguishing | OFF | OFF | OFF | |
| | If Water Temp.> Th25 | → goes in Block | 011 | 011 | 011 | |
| 6.2 | Check Up | | | | | |
| Timer | | Controls | Combustion Fan | Auger | Igniter | |
| T01 | If Exhausting Temp. > Th09 | → goes in Normal | Max Speed | OFF | OFF | |
| 6.3 | Pre-Heating | | | | | |
| Timer | | Controls | Combustion Fan | Auger | Igniter | |
| T02 | If Exhausting Temp. > Th09 | → goes in Normal | U01 | OFF | ON | |
| 6.4 | Pre-Loading | | | | | |
| Timer | | Controls | Combustion Fan | Auger | Igniter | |
| T03 | If Exhausting Temp. > Th09 | → goes in Normal | U01 ON ON | | | |
| 6.5 | Fixed Phase | | | | | |
| Timer | | Controls | Combustion Fan | Auger | Igniter | |
| T04 | If Exhausting Temp. > Th09 | → goes in Normal | U01 | C01 | ON | |
| 6.6 | Variable Phase | | | | | |
| Timer | | Controls | Combustion Fan | Auger | Igniter | |
| T05 | If Exhausting Temp. > Th09 | → goes in Normal | | | | |
| 103 | If Exhausting Temp. >Th06 | → goes in Stabilization | I Ignition: U01 | I Ignition: C01 | ON | |
| Control | | → tries again Ignition from 5.6 Variable phase | II Ignition: U10 | II Ignition: C10 | If Exhaust Temp.< Th02 | |
| after T05 | If Exhausting Temp. <th06< b=""></th06<> | → goes in Extinguishing with error Er12 in case of finished number of attempts | | | remp.< moz | |
| 6.7 | Stabil ization | | | | | |
| Timer | | Controls | Combustion Fan | Auger | Igniter | |
| | If Exhausting Temp. > Th09 | → goes in Normal | | | | |
| T06 | → tries again Ignition da 5.6 Fase Variabile | | | ON | | |
| | II Exhausung remp. < 11100 | Exhausting Temp. < Th06 → goes in Extinguishing phase with error Er12 in case of finished number of attempts | U02 | C02 | If Exhaust | |
| Control after T06 | If Exhausting Temp. > Th06+d01 | → goes in Normal | | | Temp.< Th02 | |

6.8 Recover Ignition

The system goes in **Recover Ignition**:

• After a lack Voltage Supply when the stove were in **ON**, when the voltage return if the Exhausting Temperature > **Th06+D01**

• Pushing the button ON/OFF when the system is in **Extinguishing**

| | | <u> </u> | | | |

| To exit: Push for 3 seconds button P1 With no more block conditions → Goes in OFF | OFF | OFF | OFF |

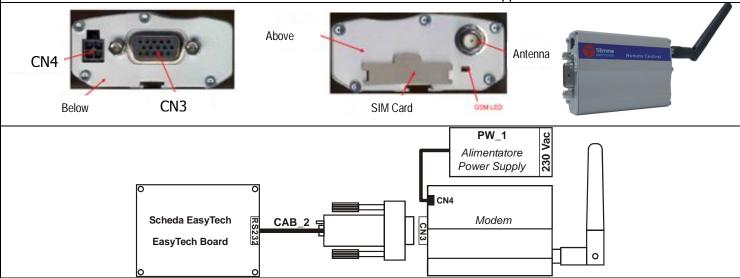

7 Functions

7.1 Modem management

The system manages a modem module (given on demand) for the dialogue with the stove through SMS to operate the Ignition, Extinguishing, State's request and have information about the Block/Alarms conditions. The Modem is connected to the Control Board's port RS232 with cables and connectors given; it is supplied with a AC/DC Power Supply unit.

- Use a SIM card in the Modem enabled to the traffic GSM data
- Desable the PIN request from the SIM
- The Modem management is activated with the parameter A50 =1
- The insertion and removal of the SIM card MUST be done with the Modern NOT supplied

| The use | The user can send an SMS to the Modem's SIM with a command word written both capital and small | | | | | |
|--|---|--|--|--|--|--|
| Start | To start Ignition from stove OFF. The Modem sends back a message to the number from which it received the command with a status and a possible alarm error code. | | | | | |
| Stop To start Extinguishing from stove ON. The Modem sends back a message to the number from which it received the comm status and a possible alarm error code. | | | | | | |
| Status | To ask the stove's State . The Modem sends back a message to the number from which it received the command with a status and a possible alarm error code. | | | | | |
| Learn | To Learn the number to send an SMS in case of Block. If there is a Block condition, the Modem automatically sends a message to the learnt number with the stove's state and the alarm error code. | | | | | |

7.2 Supply Voltage Lack Management

In case of Supply Voltage lack, the system saves the most important functioning data.

With the return of the Supply Voltage, the system evaluates the saved data and:

- If the stove were ON and the Exhausting Temperature more than **Th06+d01** the system goes in **Recover Ignition**. Pushing the button P1 it is possible the sudden new system's Ignition.
- If the stove were ON but the Exhausting Temperature is less than **Th06+d01** the system goes in **Extinguishing** with error **Er15**.
- If the stove were OFF, or in Extinguishing or Block, the system returns in the previous state.
- - After the reset by the button P1, the **Time** value blinks signalling the need to set the right Time

7.3 Combustion power change delay Management

When the system exits from the Ignition and goes in **Normal**, the Combustion Power, starting from the Combustion Power 1, reaches the target one increasing the value with the delay time as the timer **T18**.

The other manual or automatic power changes are managed and actuated with the delay time as timer T17.

7.4 Brazier's periodic cleaning

When the stove is activated, the system automatically starts the brazier's periodic clearing.

With intervals as Timer **T07** (minutes) the Combustion is taken to Periodic Cleaning Power according to parameters **C08** and **U08** for the Timer **T08** (seconds).

7.5 Automatic combustion power management

In the Combustion Power setting, the user can set the Automatic modality [A]

The work power is automatically selected according to the Water Temperature and the value of the selected Boiler Thermostat:

- Water Temperature ≤ Boiler Thermostat–d08
 - → The system goes to the maximum available Combustion Power
- Boiler Thermostat-d08< Water Temperature < Boiler Thermostat
 - → The Combustion Power decreases reaching the Boiler Thermostat
- Water Temperature ≥ **Boiler Thermostat**

→ The system goes to Combustion Power 1 if **A06=0** or to Modulation Power if **A06=1**

| Example: A06 = 1 | Modality = | [A] E | Soiler Thermos | tat =75 °C | d08 = 5 °C | P03 = 5 |
|--------------------------------|------------------|---------|-----------------------|------------|----------------|----------------|
| Water Temperature °C | ≤ 70 | 71 | 72 | 73 | 74 | ≥ 75 |
| Work Combustion Powe | r Power 5 | Power 4 | Power 3 | Power 2 | Power 1 | Power 1 |

| 7.6 | 7.6 Pellet Load Correction Management | | | | | | | | | | | |
|--------------|--|-------------------|------------------|------------------|----------------|-------------|---------|--|--|--|--|--|
| | The user could correct the Auger's times ON of Pellet Loading in Step – 7 ÷ 7 P15 is the percentage value of the single correction Step and is applied on the Work default values. | | | | | | | | | | | |
| P15 is the p | ercentage value | e of the single c | orrection Step a | nd is applied on | the Work defau | ılt values. | | | | | | |
| C03=2,0 | C03=2,0 | C03=2,0 | C03=2,0 | C03=2,0 | C03=2,0 | C03=2,0 | C03=2,0 | | | | | |
| C03=1,8 | C03=1,8 | | | | | | | | | | | |
| | The defined values are within the defined range P27 ÷ P05 | | | | | | | | | | | |

| 7.7 Combustion fan correction management | | | | | | | | |
|--|----------|----------|----------|----------|----------|----------|----------|--|
| The user could correct the Combustion Fan Speed in Step – 7 ÷ 7 | | | | | | | | |
| P16 is the percentage value of the single changing Step and is applied on the Work default values. | | | | | | | | |
| U03=1000 | U03=1000 | U03=1000 | U04=1200 | U05=1400 | U06=1600 | U07=1800 | U11=900 | |
| U03=1150 | U03=1150 | U03=1150 | U04=1380 | U05=1610 | U06=1840 | U07=2070 | U11=1035 | |
| The defined values are within the defined range P14 ÷ P30 | | | | | | | | |

| 7.8 Speed combustion fan management | | | | | | |
|--|--|--|--|--|--|--|
| The parameter P25 sets the regulation modality of the Exhausting Fan Speed | | | | | | |
| P25=0 | Exhausting Fan without Encoder: the speed is defined by the set voltage value [Volt]. The Regulation Step is of 5 Volt. | | | | | |
| P25=1 | Exhausting Fan with Encoder: the speed is defined by the set number of turns [RPM] In case of signal presence but regulation failed, the system goes in BLOCK with Er08 alarm In case of sensor break with absence of the signal, the system goes in BLOCK with Er07 alarm | | | | | |
| P25=2 | Exhausting Fan with Encoder: the speed is defined by the set number of turns [RPM] In case of signal presence but regulation failed, the system goes in BLOCK with Er08 alarm In case of sensor break with absence of the signal, the system goes in BLOCK with Er07 alarm. After the reset of the BLOCK done by the button P1 , the system goes Automatically to P25=0 | | | | | |
